

## FileMenu 1.1

Almost every software application has a 'File Menu'  
Why re-write the same old code again and again ?

FileMenu1.1 is a ready to use ,  
fully customizable Java component

Screenshot

- Open Source
- Ready to use
- Just **two lines** of code to plug **FileMenu** into your application

```
FileMenu fm = new FileMenu(JDesktopPane); //1. Create FileMenu
yourApplicationMenuBar.add(fm);         //2. Add to your application. Run/Deploy !!
```

- Add more menu items you need
- Remove menu items you don't want
- Standard short cut keys and accelerators. Ex. Alt-F, Ctrl-N , Ctrl-S etc.
- Default event handlers take care of **New, Open, Save, SaveAs, Recent Files and Exit** menu items. It all really works
- Disable the default event handlers. Add your own handlers. Override the event handlers
- Set the '**Look and Feel**' that suits your application
- Sufficient sample code at <http://www.makelogic.com/FileMenu/FMSamples.htm>
